**CENTRAL COAST REGIONAL DISTRICT  
FUEL CARDLOCK SITE PREPERATION  
BELLA COOLA AIRPORT (CYBD)  
SPECIFICATIONS TO BIDDERS**

**PROJECT OVERVIEW:**

The Central Coast Regional District Bella Coola Airport (CYBD) is preparing a site for the installation of a pilot operated 24/7 cardlock fuel system with two above ground fuel tanks for AV Gas and Jet B at a site on the edge of the asphalt apron east of the Bella Coola Airport Terminal building. An area east of the present 6 foot chain link fence will also be cleared and grubbed to a condition which will allow grass seeding with minor racking at a later date. The project will require removal and disposal of the chain link fence which runs from the parking lot north to the Environment Canada site. Approximately 332 m<sup>2</sup> of asphalt must be removed and disposed of at the Central Coast Regional District Landfill. An area from where the asphalt is cut east to the existing chain link fence must be excavated down to the level of buried wood and logs removed and disposed of. Area 1A (Appendix A) will be filled with cleaned excavated material from that area and Area 1B (Appendix A). For Area 1B fill material will be trucked in, compacted and graded preparing a site for the fuel facility and short access road to the parking lot. WorkSafe BC Coverage is a requirement.

**SPECIFICATIONS:**

This project consists of the following stages:

1. Removal of a 6' high chain lake fence on the east and south side of the apron running from the parking lot in the south to Environment Canada weather instruments on the north. Disposal of the steel fencing is the responsibility and at the cost of the contractor.
2. In Area 1 - using an asphalt cutting device, score and cut a clean line in the apron asphalt of approximately 53 metres running north and south on the marked line on the asphalt. Approximately 332 m<sup>2</sup> of asphalt east of this line is then required to be broken up and removed and transported at the contractor's expense to the Central Coast Regional District Landfill. Landfill fees are the responsibility of the contractor and evidence of disposal by way of a receipt from Thorsen Creek Waste and Recycling centre must be provided to the CCRD Project Manager.
3. In Area 1A, north of the mid point of the project area, replace clean excavated material with only minor wood debris (less than 10 cm by 50 cm pieces) remaining back in the trenched area and compacting in 30 cm lifts with an excavator. Restore ground to grade level of existing asphalt sloping at 2% to the east where the fence line is and tied into the land clearing part of Area 2. This area will be grass seeded by the CCRD.
4. In Area 1B, south of the mid point of the project area, excavate and remove woody debris causing subsidence of the ground. Sample trenches indicated some full-length

cottonwood and other species of logs are buried down to the water table at approximately 1.8 m depth. Woody debris is to be hauled to a designated disposal site on airport property 1.75 kms away. Clean material excavated from this area can be used to fill to grade Area 1A on the north side and the remainder spread over the land clearing Area 2 to the east which will be grassed by the CCRD.

5. Back fill Area 1B with 3” minus clean fill with machine compacting in 30cm depth increments with a machine compactor to the 95% Standard Proctor Density compaction. The final 30 cm of top depth will be filled and compacted to 95% Standard Proctor Density with 1” minus crush gravel and sloped at 2% to the east. All gravel will be supplied by the CCRD and stockpiled either north or east of the proposed fuel tank location. Proponents will not assume any efficiencies related to direct dumping of gravel into fill areas, or hauling of debris to landfill or airport disposal areas as a result of the CCRD trucking and stock piling operations.
6. The Contractor must install safety fencing to replace any chainlink fence removed along the south edge of Area 1B to prevent public or pedestrian access to the airside at all times. At the completion of the project there must be a temporary fencing barrier on the south side of Area 1 B to the power line consisting of old fencing and old logs to prevent public access until the fuel system is installed with new fencing and gates.
7. Clear and grub Area 2 – approximately 1536 m<sup>2</sup> of all standing trees and wood debris and leave the ground in a condition that with minor farm implements the area can be raked and grass seeded. The contractor will completely remove all the standing, dead and buried woody debris down to 1 metre depth in Area 2 delineated on the Appendix A map, which is attached and forms part of this document. The cleared areas are to be leveled and raked clean of all roots, branches and rocks to facilitate seeding and mowing. The ground should be level within 6” over a 10’ area to provide a surface safe for a ride on lawn mower. The Contractor must leave the ground in a grass seed ready condition that can be safely mowed to a 2” grass height by a ride on mower. The CCRD is responsible for seeding. Woody debris, including stumps, branches and roots will be trucked from the site by the contractor to a designated spoil site 1.75 km away within the CCRD Airport property. The site is off the west end of the dike road and will be shown to the contractor. The natural slopes of the area can be maintained. Rocks larger than 3” must be loaded, trucked and dumped at a site within the Bella Coola Airport property that will be designated. Smaller rocks may be pushed down.
8. The CCRD reserves the right to issue a stop work order and have the contractor cease all operations if:
  - a. at any point the contractor is found to be in contravention of the *BC Occupational Health, and Safety Regulation*, or
  - b. is found to be engaged in activity that is negatively impacting airport operations.

All works are to be completed by November 30, 2021.

**HAZARDS:**

1. Power Line along east edge of Area 2. Contractor is required to notify BC Hydro of intent to work near and under the right of way.
2. The area has been checked for buried power/data lines, but contractor shall be vigilant for presence of yellow tape discovered marking potential buried lines.
3. Aircraft movements on the apron and wind from prop or jet engines. All small items, clothing, tools to be kept secure. Aircraft movements. Contractor will be issued a permit to work on the airside inside and east of an area clearly marked off by traffic cones. No driving on the apron, runway or approaches if permitted. Dogs and people not associated with the site are not permitted within the work area.

### THE SERVICES

- 1.01 The Contractor shall provide the following Services:
- (a) Remove chain-link fence and asphalt and rehabilitate and Area 1A and Area 1B and land clear Area 2 as per speciations in the Proposed Work
  - (b) Proceed with the work plan as outlined below:

### PROPOSED WORK

#### PROJECT OVERVIEW:

The Central Coast Regional District Bella Coola Airport (CYBD) is preparing a site for the installation of a pilot operated 24/7 cardlock fuel system with two above ground fuel tanks for AV Gas and Jet B at a site on the edge of the asphalt apron east of the Bella Coola Airport Terminal building. An area east of the present 6 foot chain link fence will also be cleared and grubbed to a condition which will allow grass seeding with minor racking at a later date. The project will require removal and disposal of the chain link fence which runs from the parking lot north to the Environment Canada site. Approximately 332 m<sup>2</sup> of asphalt must be removed and disposed of at the Central Coast Regional District Landfill. An area from where the asphalt is cut east to the existing chain link fence must be excavated down to the level of buried wood and logs removed and disposed of. Area 1A (Appendix A) will be filled with cleaned excavated material from that area and Area 1B (Appendix A) fill material will be trucked in, compacted and graded preparing a site for the fuel facility and short access road to the parking lot. WorkSafe BC Coverage is a requirement.

#### SPECIFICATIONS:

This project consists of the following stages:

1. Removal of a 6' high chain lake fence on the east and south side of the apron running from the parking lot in the south to Environment Canada weather instruments on the north. Disposal of the steel fencing is the responsibility and at the cost of the contractor.
2. In Area 1A and Area 1B - using an asphalt cutting device, score and cut a clean line in the apron asphalt of approximately 53 metres running north and south on the marked line on the asphalt. Approximately 332 m<sup>2</sup> of asphalt east of this line is then required to be broken up and removed and transported at the contractor's expense to the Central Coast

Regional District Landfill. Landfill fees are the responsibility of the contractor and evidence of disposal by way of a receipt from Thorsen Creek Waste and Recycling centre must be provided to the CCRD Project Manager.

3. In Area 1A, north of the mid point of the project area, replace clean excavated material with only minor wood debris (less than 10 cm by 50 cm pieces) remaining back in the trenched area and compacting in 30 cm lifts with an excavator. Restore ground to grade level of existing asphalt sloping at 2% to the east where the fence line is and tied into the land clearing part of Area 2. This area will be grass seeded by the CCRD.
4. In Area 1B, south of the mid point of the project area, excavate and remove woody debris causing subsidence of the ground. Sample trenches indicated some full length cottonwood and other species of logs are buried down to the water table at approximately 1.8 m depth. Woody debris is to be hauled to a designated disposal site on airport property 1.75 kms away. Clean material excavated from this area can be used to fill to grade Area 1A on the north side and the remainder spread over the land clearing Area 2 to the east which will be grassed by the CCRD.
5. Back fill Area 1B with 3" minus clean fill with machine compacting in 30cm depth increments with a machine compactor to the 95% Standard Proctor Density compaction. The final 30 cm of top depth will be filled and compacted to 95% Standard Proctor Density with 1" minus crush gravel and sloped at 2% to the east. All gravel will be supplied by the CCRD and stockpiled either north or east of the proposed fuel tank location. Proponents will not assume any efficiencies related to direct dumping of gravel into fill areas, or hauling of debris to landfill or airport disposal areas as a result of the CCRD trucking and stock piling operations.
6. The Contractor must install safety fencing to replace any chainlink fence removed along the south edge of Area 1B to prevent public or pedestrian access to the airside at all times.
7. Clear and grub Area 2 – approximately 1536 m<sup>2</sup> of all standing trees and wood debris and leave the ground in a condition that with minor farm implements the area can be raked and grass seeded. The contractor will completely remove all the standing, dead and buried woody debris down to 1 metre depth in Area 2 delineated on the Appendix A map, which is attached and forms part of this document. The cleared areas are to be leveled and raked clean of all roots, branches and rocks to facilitate seeding and mowing. The ground should be level within 6" over a 10' area to provide a surface safe for a ride on lawn mower. The Contractor must leave the ground in a grass seed ready condition that can be safely mowed to a 2" grass height by a ride on mower. The CCRD is responsible for seeding. Woody debris, including stumps, branches and roots will be trucked from the site by the contractor to a designated spoil site 1.75 km away within the CCRD Airport property. The site is off the west end of the dike road and will be shown to the contractor. The natural slopes of the area can be maintained. Rocks larger than 3" must be loaded, trucked and dumped at a site within the Bella Coola Airport property that will be designated. Smaller rocks may be pushed down.

8. The CCRD reserves the right to issue a stop work order and have the contractor cease all operations if:
  - a. at any point the contractor is found to be in contravention of the *BC Occupational Health, and Safety Regulation*, or
  - b. is found to be engaged in activity that is negatively impacting airport operations.

All works are to be completed by November 30, 2021.

**HAZARDS:**

1. Power Line along east edge of Area 2. Contractor is required to notify BC Hydro of intent to work near and under the right of way.
2. The area has been checked for buried power/data lines, but contractor shall be vigilant for presence of yellow tape discovered marking potential buried lines.
3. Aircraft movements on the apron and wind from prop or jet engines. All small items, clothing, tools to be kept secure. Aircraft movements. Contractor will be issued a permit to work on the airside inside and east of an area clearly marked off by traffic cones. No driving on the apron, runway or approaches if permitted. Dogs and people not associated with the site are not permitted within the work area.
